

# SickKids COVID-19 Seroprevalence Study

## Why is this study important?

Our central aim is to support schools and parents across the GTA by surveying children and adolescents for COVID-19 exposure through testing for viral antigen and antibody. This information will help us monitor COVID-19 exposure and understand immune protection in non-vaccinated and vaccinated children and adolescents.

## Who can participate?

Individuals aged 0-18 years are invited to participate!

## What does participation involve?

- Informed consent
- Completion of short health questionnaire
- Donation of a nasopharyngeal swab (rapid antigen test) AND/OR a small blood sample (~1 teaspoon, antibody test)

## How will I benefit?

- Receive test results in a timely manner
- Give back to the community by helping to improve our understanding of immune protection against COVID-19 in children and adolescents
